DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of the invention of Group I, encompassing claims 1-8, in the reply filed on November 1, 2007 is acknowledged.

Priority

Acknowledgement is made to Applicant's claim of priority to Japanese Patent Application No. 2002-178612 filed June 19, 2002. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Objections

Claims 4-8 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim should refer to other claims in the alternative only, and/or, cannot depend from any other multiple dependent claim. See MPEP§ 608.01(n). Accordingly, the claims have not been further treated on the merits.

Status of the Claims

Claims 9-13 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on November 1, 2007. Claims 4-8 have not been treated on the merits (see above claim objection).

Claims 1-3 are under consideration in this Application.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Syudo (EP 1151751). Syudo discloses gel compositions formed by cross linking a polymer with two substances selected from magnesium aluminometasilicate ($\text{Al}_2\text{O}_3 \bullet \text{MgO} \bullet 2\text{SiO}_2 \bullet x\text{H}_2\text{O}$); dried aluminum hydroxide gel ($\text{Al}_2\text{O}_3 \bullet n\text{H}_2\text{O}$); and aluminum chloride (abstract and page 3, lines 33-44) said composition comprising polyacrylic acid, sodium polyacrylate, water, and L-ascorbic acid with pHs of 8.5, 6.0, 7.5, 6.5, and 7.0 when diluted with purified water (page 5, table 1). Therefore meeting all of the limitations of Applicant's claims 1-3.

It should be noted that the Examiner is interpreting the compound magnesium aluminometasilicate having the formula ($\text{Al}_2\text{O}_3 \bullet \text{MgO} \bullet 2\text{SiO}_2 \bullet x\text{H}_2\text{O}$) as being a type of magnesium hydroxide-aluminum hydroxide co-precipitate because the prior art teaches aluminum hydroxide gel has the formula of $\text{Al}_2\text{O}_3 \bullet n\text{H}_2\text{O}$, which is present in the magnesium aluminometasilicate compound. The presence of water in the magnesium aluminometasilicate formula would seemingly suggest the aluminum and magnesium are in hydroxide form or alternatively would degrade to form aluminum hydroxide and magnesium hydroxide therefore meeting the limitations of Applicant claim 3.

Applicant is invited to provide evidence to the contrary.

Conclusion

No claims allowed.
